

Highlander & FocusPrime Ram Sale

Monday 28th September 2026

Mt Carmel Yards
967 McGledes Hill Rd
Eurongilly NSW 2663

Inspections: 9:00am
Sale: 12:00pm (AEST)

On-property auction
(interfaced with AuctionsPlus)

Leo Herbert, Stud Principal	0429 434 223
James Croker, Nutrien Livestock	0427 753 533
Matt Campion, Nutrien Stud Stock	0437 290 435

UNDERSTANDING ASBVs

An Australian Sheep Breeding Value (ASBV) is an estimate of the genetic potential a sheep will pass on to its progeny. Based on pedigree and performance information, they take the guesswork out of ram selection. To assist you with your ram selections, we have explained the Maternal and Terminal ASBVs in our ram catalogue against the Maternal and Terminal Breed Averages.

PWT POST WEANING WEIGHT

Weight at 200 days, this is an important ASBV for ewe lamb joining. Rams with a more positive PWT produce lambs that grow quicker and reach target weight in a shorter time.

YERA YEARLING EWE REARING ABILITY

How successfully did the ewe rear her litter? The ability of the ewe to rear the lambs she gives birth to, relative to other ewes with the same litter size. Sires with higher ERA will produce daughters which rear more of their litter.

MWWT MATERNAL WEANING WEIGHT

Rams with more positive MWWT produce daughters that will wean heavier lambs.

BWT BIRTH WEIGHT

Rams with more negative BWT produce lambs which are lighter at birth improving lambing ease.

LS LITTER SIZE

How many lambs were born? Sires with higher LS will produce daughters that give birth to more lambs.

Lot 5		250012		HIGHLANDER		Rear Type: 3				Born: 8/7/2025			
CO 214550		CH170188		The highest-ranked MCP+ sire offered for sale, based on LAMBPLAN analysis, with elite stud potential or scope to lift flock profitability.									
Sire: CO 222817		Dam: 200031											
CO 195308		160120											
LAMBPLAN MATERNAL ASEVS

Comments:													

PWEC POSTWEANING WORM EGG COUNT

Rams with more negative WEC produce progeny who have a higher genetic potential to resist worm burdens

YCON YEARLING CONCEPTION

Did the ewe conceive? The ability of a ewe to get in lamb in comparison to all the ewes in the same joining event. Sires with higher YCON will produce daughters which have a higher conception rate when joined as ewe lambs.

YFD YEARLING FIBRE DIAMETER

A ram that has a YFD of -0.8 will produce progeny that are genetically 0.4 microns finer than a ram with a YFD of 0.

AWT ADULT WEIGHT

Weight as an adult, over two years of age. Rams with more positive AWT produce progeny that are heavier as an adult.

WR WEANING RATE

Weaning rate is the number of lambs weaned per ewe joined. A ram with a WR of 0.2 will have daughters who, on average, wean 0.1 more lambs per ewe joined, than daughters of a ram with a WR of 0.

Maternal Carcase Production + and Maternal Wool Production + INDEXES

These Indexes help you select for use within a breeding program when there are many traits of importance.

TOP 1%	TOP 5%	TOP 10%	TOP 20%
--------	--------	---------	---------

We have highlighted trait leaders in these percentile bands for Maternal ASBVs

MCP+, MWP+ and LEQ Indexes

Indexes support you in selecting animals within your breeding program when considering many different traits of importance. Using an index when purchasing rams allows you to make genetic progress towards a more profitable sheep in your production system. Please take time to read up on what is included in the index you are using.

PWT POST WEANING WEIGHT

Weight at 200 days, this is an important ASBV for ewe lamb joining. Rams with a more positive PWT produce lambs that grow quicker and reach target weight in a shorter time.

IMF INTRAMUSCULAR FAT

Measure of the chemical fat percentage in the loin muscle. Rams with a more positive IMF will produce progeny with higher levels of marbling in the loin muscle.

DRESS DRESS PERCENTAGE

Rams with a more positive DRESS produce lambs that have higher lean meat yield percentage at slaughter.

LEQ INDEX

LAMB EATING QUALITY

The LEQ index balances large improvements in eating quality with modest increases in lean meat yield, and includes emphasis on worm egg count ASBVs.

BWT BIRTH WEIGHT

Rams with more negative BWT produce lambs which are lighter at birth improving lambing ease.

Lot 81		256007		FOCUSPRIME				Born: 8/7/2025	
FE 210373		FA 190231		Growth and muscle sire for heavier, high-yielding lambs.

Comments:									

PWEC POSTWEANING WORM EGG COUNT

Rams with more negative WEC produce progeny who have a higher genetic potential to resist worm burdens

PEMD POST WEANING EYE MUSCLE DEPTH

A ram with a more positive PEMD produce lambs that have more muscle and yield more lean meat.

SHEAR5 SHEAR FORCE

Measure of the force required to cut through the loin muscle after 5 days of ageing. Rams with more negative SF5 produce lambs with more tender meat.

LE LAMBING EASE

Rams with a more positive LE will produce progeny that have lower incidence of lambing difficulties.
